Itlas

Why should a foreign retailer choose a "Made in Italy" product?

Wood floors created by Itlas are 100% made in Italy certificated: they are produced entirely in Italy with first-choice natural materials, exclusive models and traditional Italian craftsmanship.

Alessandro Di Bernardo, Sales Manager

Collection I Massivi. Itlas has chosen to develop its own line of furniture, using the same natural, certified materials with which it has always made its floors. The creator of this collection is the architect Marco Casamonti who, together with Studio Archea in Florence, has designed unique products, able to express the value of the authentic, preciousness of nature, beauty of raw wood that Itlas loves so much.

Legni Del Doge Oak Materia. A finishing that combines the features of raw unfinished wood with the characteristic of Itlas technological floorings, while it reproduces the true essence of wood with treatments that are imperceptible to the eye.

Klindex

Why should a foreign retailer choose a "Made in Italy" product?

Because "made in Italy" branded products perfectly match the needs of our customers.

Not only as far as elegance, style and design are concerned. "made in Italy" means ideation, technical research and the creation of reliable and technologically advanced precision products, that guarantee always the highest quality.

Filippo Benvenuti, Export office

Timba can do, on any type of wood floor, jobs that traditionally are made with 3 different machines: it smooths like a traditional belt sanding machine; it finishes the floor like a mono-brush; it sands up to the skirting borders of the walls like an edging machine. With Timba an unrivaled floor planarity can be achieved thanks to its planetary system. The 360° multi-directional wheels allow to move the machine in any direction even very close along the border. It is easy to use and doesn't need special training like the belt sanding machines. Free of dust thanks to the improved vacuum system. **Minitimba** is a compact and powerful dual counter-rotating head sanding machine with powerful built-in vacuum (optional). It quickly levels very close to the wall, thanks to the two perfect balance of the counter-rotating heads. Minitimba is easy to use even by the less experts. Ball wheels drive Minitimba in each direction with the same easiness of a computer mouse. It is ideal for both finishing works and for leveling a screed. Light and easy to carry.
