INNOVATION in TRADITION

Itlas is the Italian leader for engineered wooden floors. Its business is based on attention for the environment and starts from a carefully controlled raw material: the wood we use comes from forests that are managed in a correct and responsible way. Assi del Consiglio, Tavole del Piave and Legni del Doge gained the "100% Made in Italy Certificate". Itlas' products are entirely made in Italy, with first-choice natural materials and finished with natural wax or oil or water-based varnish.

5 millimetri

The 5mm programme from ITLAS extends its natural function to become a complete solution for the home. Meet 5mm, the bathroom project in which the different woods, originally intended to grace floors and walls, become a central, distinguishing element in solutions created for the bathroom. This blend of design and nature espouses concepts of elegance and refinement, focusing on spaces where emotions and intimacy merge.

Assi del Consiglio

Assi del Consiglio is a large prefinished three-layer planking, ideal for floors, dropped ceilings and cladding, handmade with artisan techniques and treated with eco-friendly water-based varnish and adhesive. The exposed layer is in noble beech wood from the Consiglio Forest, which is PEFC certified. This is a totally Italian project, from raw material to production.

Tavole del Piave

Tavole del Piave is a large prefinished three-layer planking, designed for floors, dropped ceilings and claddings. The exposed layer is in noble wood, available in different essences and finishes. This project originated from the cult for tradition, love for wood and predilection for artisan work: a prestigious planking with which Itlas has rediscovered the floors of yore, reintroducing them with the same value and emotions.
